

3. MOBILE NAVIGATION & HEADER

- Reduce top-level navigation items to 5-6 maximum.
- Implement sticky header with reduced height on scroll.
- Add sticky bottom CTA bar (Call | WhatsApp | Get Quote).
- Hamburger menu animation must be <300ms.
- Ensure all tap targets minimum 48x48px.
- Disable unnecessary hover effects for mobile.

* Navigation items:

- Home
- Products.
- Applications.
- About
- FAQs.
- Contact.

Any other item in footer.

* Products items:

- Balcony Enclosure (Inside Page we'll mention S&T).
- Partition (Inside Page:- list all)
- ~~Door~~ Inside Page: list all
- ~~Window~~ (Inside Page: list all)

* Applications:

- Page will open having list of area of usage, once clicked on the area of usage → we'll get list of suggested products that can be used to cater the required space.

- List of applications:-

- Ⓐ Balcony Ⓑ Int. Partition ~~Commercial property~~ Ⓓ office space
- Ⓔ Commercial property Ⓗ Exterior Ⓘ Terrace Ⓚ Garden.
- Ⓛ Farm House

4. PRODUCTS SECTION (UX & STRUCTURE)

- Use vertical card stack layout.
- Image aspect ratio consistent (1:1 or 4:5).
- Each card: H3 title, 1-line benefit, CTA buttons.
- Add 'Most Popular' ribbon on best-selling product. — Info SET in our case.
- Lazy-load product images.
- Remove long descriptions from homepage.

* List of Products.

- Slide & Turn System (Subtitle — Balcony Enclosure)
- Telescopic Slider System.
- Centre Open System.
- Bi-fold
- 2 Track Slider — (2 type :- Door/window)
- 3 Track Slider — (2 type :- Door/window)

* For (a) :-

When clicked, we'll have two variants:

- Full Length.
 - From floor to ceiling coverage.
- Half Length. (It has again 2 options)
 - (i) From railing top to ceiling / use as window.
 - (ii) Keep fix glass as railing & s.and.t. from ~~fix~~ top to ceiling. or vice versa if top fix.

5. APPLICATIONS SECTION

- Replace large banners with icon-based 2-column mobile grid.
- Icon size: 32-40px.
- Max 2-line description per application.
- Add section CTA below grid.
- Maintain 24px vertical spacing.

* List of applications

- Refer to Point "1.", applications.
- Will keep them same as there.

* About

① Scroll Journey -

→ Bullet Points → howr → expand pop-up with full content.

* Product Page :-

① Tech specs section.

* Gallery

- ① Cards for Product type/uses
e.g - Balcony, Terrace, window etc.
→ Images sort accordingly.

7. LEAD FORM OPTIMIZATION

- Form fields limited to Name, Phone, City.
- Phone field auto numeric keypad.
- Add WhatsApp pre-filled link button.
- Submit button full width.
- Add inline validation.
- Redirect to thank-you page with tracking. — (Category + meta)

* Estimation rule :

— calculate rates (L x H), on ₹1800/sqft.

— Also, mention final estimate excluding int. charge & GST.

e.g:- L = 10ft, H = 10ft.

area = 100 sq.ft

cost = 100 x 1800

= 1,80,000

So, we'll show.

Your approximate cost

₹ 1,80,000 + Installation Charges.

all prices are excluding taxes &
freight
charges.

9. SEO & TECHNICAL STRUCTURE

- Single H1 per page.
- Logical heading hierarchy (H1 > H2 > H3).
- Add schema markup (Local Business, Product).
- Optimize meta titles for location + product keywords.
- Add alt text to all images.
- Create XML sitemap. — very imp. to get search rankings.

10. ACCESSIBILITY & MOBILE USABILITY

- Minimum 16px body text.
- Contrast ratio WCAG compliant. — (imp. for visibility everywhere).
- Buttons clearly distinguishable.
- No text embedded inside images.
- Ensure proper focus states.

* Sticky Pill navigation for mobile & PC.

* Sticky WA icon on bottom right.
